

WHAT'S SO GREAT ABOUT PLANTING TREES?

Scotland's **forests** bring

to the **economy** each year and support over **25,000 jobs**.

Trees **remove** around
4.6 MILLION
cars' emissions each year.

They are home to more than
200 SPECIES

of **plants, birds** and **animals** including Scottish wildcats, red squirrels, capercaillie and our national tree – the Scots pine.

FORESTS SUSTAINABLY PROVIDE:

TIMBER FOR CONSTRUCTION

HEAT FOR HOMES

SHELTER FOR WILDLIFE

INCREASED BIODIVERSITY

RELAXATION, RECREATION & SPORT

JOBS FOR LOCAL PEOPLE

CLEANER AIR & WATER

Use of **homegrown wood products** in **construction** will increase by over one third to

3 MILLION m³

per year by 2032.

The **Scottish Government** has an ambitious climate change target to plant

10,000 HECTARES

of **woodland** per year...

...that's about

25 MILLION TREES

a year, covering the same area found within **Edinburgh city bypass!**

Within **10 years**, we aim to plant

15,000 HECTARES

per year.

So let's get planting!
